

Data Framework for Mobile Reporting Application – CURRENT DATA FRAMEWORK

5/13/14

User Set Up:

- Sector (Affects Entire Project Framework)
- Country (Affects PDI list)

The Activity is the only data point the end user, the Volunteer, is generating.

All of the Project Framework, including the Goals, Objectives, and Indicators (Outputs, Outcomes, and Post Defined Indicators), are pre-set values determined by Peace Corps.

If an Activity touches on an Objective, that Objective must be measured by a corresponding indicator. The reverse is NOT true however, an activity may touch on an indicator that wasn't connected to the primary objective(s).

In the diagram, Goal1/ObjA and Goal2/ObjB were both affected by the Activity, so they must be measured by Indicators they relate to. The example Activity also touched on Output VI in Column 2 and PDI V in Column 5, even though their corresponding Objectives were not the focus of the activity, those indicators were side benefits of the activity.
